

These are the ONLY Burgeon-approved cleaners!
Use of any other cleaner will void your product warranty.
***Kills the COVID-19 when used in combination!**

Cleaning Instructions for your Burgeon goods:

Safe for all-over use (wood and acrylic surfaces):

For cleaning:

Daily cleaning of your Burgeon installation is recommended. When daily cleaning is attainable, a simple soft cloth dampened with warm water will suffice. The cleaning cloth should be thoroughly wrung out before cleaning structures. Do not use abrasive pads as these will dull the sheen. Soak and wring cloth often, and change cleaning water often- your surface can only be as clean as your cloth or cleaning water.

Should you want to use a manufactured cleaning product on your work (which we DO recommend once a week), Burgeon Group lists ONLY the following *tested and approved* cleaners:

Murphy's Oil Soap. Use 2 tablespoons of Murphy's Oil Soap per gallon of water. Apply with a dampened cloth, as procedure above.

Clorox Anywhere Hard Surface. Please spray this product onto a soft cloth, then wipe. Avoid spraying directly from the bottle onto your Burgeon works- this saturates the wood and drips into crevices where cleaner should not go. This is any easy product to sanitize with. **New! Add 1 tablespoon of bleach to a 22oz bottle to sanitize for COVID-19 or use bleach dilution solution described below!**

Seventh Generation Disinfecting Wipes. These are great for spot-cleaning and are safe to leave out for customer use. No instruction needed- just follow directions on the label!

Bleach dilution. If you prefer to sanitize with a bleach solution, follow these 1:50 ratios: 4 teaspoon bleach: 1quart water or 1/3cup bleach: 1gallon water. Spray onto a soft, clean cloth and wipe.

Plexi-Clean. We recommend this product specifically for cleaning your plastic and acrylic surfaces, however it is safe if it gets onto wood too! Just spray the cleaner onto a soft clean cloth and wipe.

** a special note for your plastic and acrylic items- *Do not use any products containing ammonia (e.g. Windex or Formula 409).* Ammonia will cloud acrylic over time. Ammonia-free glass and plastic cleaners are fine on acrylic panels only, but NEVER on wood surfaces.

In general, for all items:

Do not use any chemicals. If you see unfamiliar chemicals on the label, we encourage you to contact us first.

Some of the seemingly common chemicals that can void your warranty include:

- Ammonia
- Alcohol
- sanitizing or disinfecting wipes
- silicone based cleaners or dusting agents such as Pledge
- hydrogen peroxide
- quats
- oxidizing cleaners
- acetone
- benzene
- carbon tetrachloride
- xylene
- lacquer thinner
- paint thinner
- mineral spirits
- Tri sodium phosphate
- Dimethyl Benzyl Ammonium Chloride
- NDimethyl Ethylbenzyl Ammonium Chloride
- Petroleum distillates
- Citrus cleaners

(that's a lot of stuff!)

Upholstery care:

The fabric we use has an industry cleaning code of "W". It can be cleaned using water-based cleaning agents or foam. Scotchguard makes a foam-type fabric cleaner that is widely available. Machine washing is not recommended for this type of fabric, as over time it wears down the protective finish.

Carpet care:

All areas should be vacuumed nightly. While most Burgeon designs take into consideration a bumper for vacuums, care should be taken to avoid ramming the base of wood elements that are exposed.

Periodic wet or shampooed carpet cleaning should stop at least 6 inches away from the installations to avoid overspray and soaking the carpet under wood installations. If the carpet near should become saturated, whether it be from carpet cleaner or an accidental spill of any kind, the liquid should be immediately extracted. Depending on the size and manageability of your Burgeon work, it can be possible to move or raise the work in order to clean the carpet underneath it, eliminating the risk of carpet cleaners soaking into the base of the wood.

Suggested frequency of cleaning:

Burgeon interactives, as with all high use items, should be spot cleaned and sanitized nightly.

Small interactive items that have high use/play should be cleaned/sanitized nightly like the wooden interactives noted above (magnets, blocks, pegs, puzzle pieces, turning wheels). Do not submerge or soak any of these items in water/cleaner, but follow the same cleaning method with a damp cloth as noted previously.

Small dishes should be run through the dishwasher on an as needed basis (but at least once a week), and the bins for dirty items should be collected and removed from the installation at least daily.

Small fabric items (felt veggies, puppets, etc) can be machine washed on the gentle cycle with baby soap as needed, usually monthly.

A final note:

The longevity of your Burgeon installation relies on following these cleaning instructions.

The cleaning industry sometimes creates demand for new products that seem better, but are actually harmful.

Manufacturer's dilution recommendations are designed to sell their products, rarely to protect your surfaces.

Contact us first if there is anything that you are considering using which is not on our list- we can test it for you!

A good general rule is to treat your Burgeon works with the same care as you would your wooden furniture at home.

We encourage you to meet with your staff and your contractors (especially if crew members change) and include these instructions as part of your contract.

If you have encountered cleaning crews using inappropriate chemicals contact us immediately. We can help you minimize the damage and identify repair solutions.

Thank you!

cleaning instructions

I'm going
to clean my
Burgeon Group
stuff!

Great!

**Bucket + Murphy's Oil Soap
(just a splash) + warm water + soft cloth**

Just splash some Murphy's Oil Soap into a bucket of warm water and throw in a soft cloth. **Wring out the cloth** as much as you can and wipe down the installation.

If you need to sanitize use **ONLY** Clorox Anywhere (see note below about not spraying directly on burgeon stuff). *Any other* bleach product is too harsh.

What
about a spray
bottle?

NO!!!!!!

The cleaner drips and pools in the nooks and crannies if you use a spray bottle. Yuck! If your solution is in a spray bottle, **spray a cloth** and wipe away little toddler germs.

How
about paper
towels?

NOPE!!!!

Paper towels are scratchy. **They'll scratch** the finish and make it all hazy and that would be sad.

Can I
use _____?

Our guess is, well...

HECK NO!!!

In order to maintain the spiffy durability of our installations, only mild cleaners should be used. These are all too harsh:

No, No, No, to: Purell, Ammonia (Windex and glass cleaner), Clorox Greenworks, Clorox Wipes, Clorox GentleBleach, bleach (all bleach, any kind of bleach, except for Clorox Anywhere) dish soap, Formula 409, Lysol (all Lysol, any Lysol), Lysol Power&Free, acetone, benzene, carbon tetrachloride xylene, quats, lacquer thinner, alcohol (inc, beer, red wine, vodka and moonshine), bleach pens, hydrogen peroxide, any oxidizing cleaners, any silicone based cleaners or dusting agents like furniture oil, Pledge and sanitizing or disinfecting wipes. Also, toothpaste, turpentine, rocks and sand, Raid, ground glass, Shout, Ajax, high explosives, those pesky Scrubbing Bubbles, Oxiclean, Mr. Clean, paint thinner, and TNT. See? Always read the fine print for jokes!

Even worse, using these products **will void your beautiful Burgeon warranty**, and that would be really sad... really.

What
if I have more
questions?

Please call us!
No question is too small or
silly. We love to hear from you.

indicaciones de limpieza

Limpiaré
mis instalaciones
Burgeon Group!

¡Estupendo!

**Cubeta + Murphy's Oil Soap
(sólo un chorro) + agua tibia + trapo suave**

Eche un chorro de Murphy's Oil Soap en una cubeta de agua tibia y sumerja un trapo suave. **Exprima el exceso de agua** lo máximo posible y páselo sobre la superficie de las instalaciones.

Si necesita esterilizarlo, use SOLO Clorox Anywhere (vea la nota de abajo de que no se debe rociar directamente cosas Burgeon). Cualquier otro producto de lejía es muy dañino.

Qué tal
una botella
rociadora?

¡¡¡NO!!!

El líquido gotea y forma charcos en grietas y ranuras si usa rociadora. ¡Qué horror! Si el producto está en una rociadora, **échelo sobre un trapo** y quíteles a los gérmenes de los nenes.

Qué tal
toallas de
papel?

¡QUE NO!

Toallas de papel son rasposas. **Rasparán** el acabado y lo volverán todo nublado y sería una pena :-)

Puedo
usar _____ ?

Pues va a ser...

¡¡¡QUE NO!!!

Para mantener lo bonito y duradero de nuestras instalaciones, solo limpiadores suaves se deben de usar. Todos estos son muy dañinos:

No, No, No, use: Purell, Ammonia (Windex y limpiavidrios), Clorox Greenworks, Clorox Wipes, Clorox GentleBleach, lejía (toda lejía, de cualquier tipo, menos Clorox Anywhere) lavavajillas, Formula 409, Lysol (todo Lysol, cualquier Lysol), Lysol Power&Free, acetona, benceno, cloruro de carbono, xylene, quats, diluido de laca, alcohol (tb cerveza, vino tinto, vodka, y aguardiente), plumas blanqueadoras, agua oxigenada, todo limpiador oxidante, a base de silicona, o producto antipolvo, aceite para muebles, Pledge y toallitas desinfectantes. Tampoco pasta de dientes, aguarrás, piedras y arena, Raid, vidrio molido, Shout, Ajax, explosivos, esos molestos Scrubbing Bubbles, Oxiclean, Mr. Clean, diluyente y TNT. Ya ve? Siempre hay que leer la letra pequeña para las bromas.

Lo que es peor, el uso de estos productos anulará su hermosa garantía Burgeon, y eso sería una verdadera pena... en serio.

Qué pasa
si tengo más
preguntas?

Llámenos por favor!
No hay preguntas tontas ni pequeñas.
Nos encantaría escucharle
